

› END-TO-END SOFTWARE PARTNER

We Build, Secure & Scale Digital Products for Growing Businesses

DeployBirds is a full-service software company — development, databases, DevOps, security testing and marketing, delivered by one accountable team instead of five different vendors.

💬 [WhatsApp us](#)

One team, full accountability

No handoffs between a dev shop, a DevOps vendor and a marketing agency. We own the outcome end to end.

Security-first delivery

VAPT and code review baked into every engagement, not billed as an afterthought.

Built to scale from day one

Cloud-native architecture and load-tested infrastructure that grows with your traffic.

Transparent timelines

Weekly demos, shared boards and clear milestones — no black-box development.

Flexible engagement

Fixed price, time & material, or dedicated team — whatever fits your budget and control needs.

Everything your product needs, in one place

From the first line of code to production monitoring — we cover the full lifecycle so you don't have to manage multiple agencies.

01 • DEVELOPMENT

Web & Mobile App Development

Custom, scalable applications built with modern frameworks — from MVPs to enterprise platforms.

02 • DATA

Database Design & Management

Schema design, migrations, performance tuning and managed operations for SQL & NoSQL systems.

03 • DEVOPS

DevOps & Cloud Infrastructure

CI/CD pipelines, containerization, auto-scaling infra and IaC on AWS, GCP or Azure.

04 • GROWTH

Digital Marketing & SEO

Search visibility, paid campaigns and content strategy that turns traffic into customers.

05 • DESIGN

UI/UX & Product Design

Research-backed wireframes, prototypes and interfaces users actually enjoy using.

06 • QUALITY

QA & Testing

Manual and automated testing that catches bugs before your customers do.

07 • SUPPORT

Maintenance & Support (AMC)

Ongoing monitoring, bug fixes and feature updates so your product never goes stale.

08 • CLOUD

Cloud Consulting & Migration

Cost-optimized cloud architecture and zero-downtime migrations for existing systems.

09 • SECURITY

Cybersecurity & VAPT

Vulnerability assessments, penetration testing and hardening against real-world attacks.

10 • PERFORMANCE

Load & Performance Testing

Simulate real traffic to find bottlenecks before your users do, at any scale.

11 • INTEGRATION

API Testing & Integration

Reliable third-party integrations and contract-tested, well-documented APIs.

12 • CONSULTING

Technical Consulting & Staff Augmentation

Architecture reviews and dedicated engineers who plug straight into your team.

What's included in each service

Part 1 of 4 — a closer look at what you actually get.

01 • DEVELOPMENT

Web & Mobile App Development

Custom software built around your business logic, not a template. We design, build and ship web apps, mobile apps and internal tools that hold up under real production load.

[React / Next.js](#)[Node.js](#)[Python / Django](#)[React Native](#)[Flutter](#)

- ✓ Custom web application development (frontend + backend)
- ✓ Native & cross-platform mobile apps (iOS, Android)
- ✓ MVP development for startups & product validation
- ✓ Legacy application modernization & re-platforming
- ✓ Third-party & payment gateway integrations

02 • DATA

Database Design & Management

A slow or fragile database will sink a fast application. We design schemas that scale and keep them healthy long after launch.

[PostgreSQL](#)[MySQL](#)[MongoDB](#)[Redis](#)[DynamoDB](#)

- ✓ Schema design & data modeling for SQL and NoSQL
- ✓ Query optimization & performance tuning
- ✓ Zero/low-downtime migrations between engines
- ✓ Backup, replication & disaster recovery setup
- ✓ Managed database administration (ongoing)

03 • DEVOPS

DevOps & Cloud Infrastructure

We turn manual, error-prone deployments into automated, repeatable pipelines — and build infrastructure that scales without midnight pages.

[AWS](#)[Docker](#)[Kubernetes](#)[Terraform](#)[Jenkins / GitHub Actions](#)

- ✓ CI/CD pipeline design & automation
- ✓ Containerization & Kubernetes orchestration
- ✓ Infrastructure as Code (Terraform / CloudFormation)
- ✓ Auto-scaling, load balancing & cost-aware architecture
- ✓ Monitoring, alerting & incident response setup

What's included in each service

Part 2 of 4 — a closer look at what you actually get.

04 • GROWTH

Digital Marketing & SEO

A great product still needs an audience. We handle the growth side so engineering and marketing pull in the same direction.

SEO Google Ads Meta Ads Content Strategy

Analytics

- ✓ Technical & on-page SEO audits and fixes
- ✓ Paid campaign management (Google, Meta, LinkedIn)
- ✓ Content strategy & social media management
- ✓ Analytics setup & conversion tracking
- ✓ Landing page CRO (conversion rate optimization)

05 • DESIGN

UI/UX & Product Design

Design that's rooted in how real users behave, not just how a screen looks — validated before a single line of code is written.

Figma Wireframing Prototyping Design Systems

User Research

- ✓ User research & journey mapping
- ✓ Wireframes & clickable prototypes
- ✓ High-fidelity UI design for web & mobile
- ✓ Reusable design systems & component libraries
- ✓ Usability testing & iteration

06 • QUALITY

QA & Testing

Manual eyes for the edge cases, automation for everything repeatable — so regressions get caught in CI, not in production.

Selenium Cypress Playwright Manual Testing

Regression Suites

- ✓ Manual functional & exploratory testing
- ✓ Automated test suites integrated into CI/CD
- ✓ Cross-browser & cross-device compatibility testing
- ✓ Regression testing before every release
- ✓ Bug tracking & detailed QA reporting

What's included in each service

Part 3 of 4 — a closer look at what you actually get.

07 • SUPPORT

Maintenance & Support (AMC)

Launch day is the beginning, not the finish line. We keep applications patched, monitored and improving under an annual maintenance contract.

Uptime Monitoring Patch Management
Feature Updates SLA-backed Support

- ✓ 24/7 uptime monitoring & alerting
- ✓ Bug fixes & security patching on a defined SLA
- ✓ Incremental feature development post-launch
- ✓ Dependency & framework version upgrades
- ✓ Monthly health & performance reports

08 • CLOUD

Cloud Consulting & Migration

Whether you're moving off on-prem servers or optimizing a bloated cloud bill, we design the architecture and execute the migration with minimal downtime.

AWS GCP Azure Cost Optimization
Well-Architected Review

- ✓ Cloud readiness assessment & migration planning
- ✓ On-prem to cloud & cross-cloud migrations
- ✓ Cost audits & right-sizing for savings
- ✓ Well-Architected Framework reviews
- ✓ Multi-region & disaster recovery design

09 • SECURITY

Cybersecurity & VAPT

Vulnerability Assessment & Penetration Testing that finds the gaps an attacker would find first — with a clear, prioritized remediation report, not just a scan dump.

VAPT OWASP Top 10 Network Security
Compliance Support

- ✓ Web & mobile application penetration testing
- ✓ Network & infrastructure vulnerability assessment
- ✓ OWASP Top 10 & secure code review
- ✓ Prioritized remediation reports & re-testing
- ✓ Compliance-readiness support (ISO 27001, SOC 2 groundwork)

What's included in each service

Part 4 of 4 — a closer look at what you actually get.

10 • PERFORMANCE

Load & Performance Testing

We simulate real-world traffic spikes — launch day, festival sale, viral moment — so you know your breaking point before your users find it for you.

JMeter k6 Locust Stress Testing

Capacity Planning

- ✓ Load, stress & spike testing under realistic traffic
- ✓ Bottleneck identification (DB, API, infra layer)
- ✓ Capacity planning for scaling events
- ✓ Performance benchmarking & regression tracking
- ✓ Actionable tuning recommendations

11 • INTEGRATION

API Testing & Integration

APIs are the contract between every part of your system. We test them rigorously and integrate third-party services so they stay reliable under change.

Postman REST GraphQL Webhooks

Contract Testing

- ✓ Functional, contract & security testing of APIs
- ✓ Third-party & payment gateway integrations
- ✓ API documentation (OpenAPI/Swagger)
- ✓ Automated API test suites in CI/CD
- ✓ Webhook & event-driven integration testing

12 • CONSULTING

Technical Consulting & Staff Augmentation

Sometimes you don't need a full project team — you need one senior architect's opinion, or a couple of engineers who can plug straight into your existing sprint.

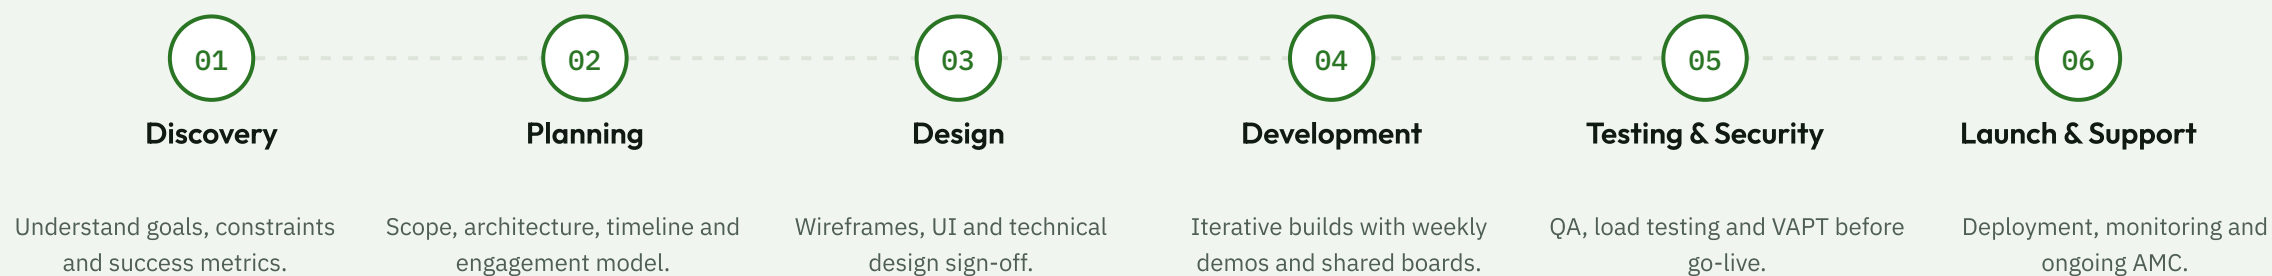

Architecture Review Dedicated Engineers

Tech Due Diligence

- ✓ Architecture & technology stack reviews
- ✓ Dedicated developers embedded in your team
- ✓ Technical due diligence for investors/acquirers
- ✓ CTO-as-a-service for early-stage startups
- ✓ Team scaling & hiring support

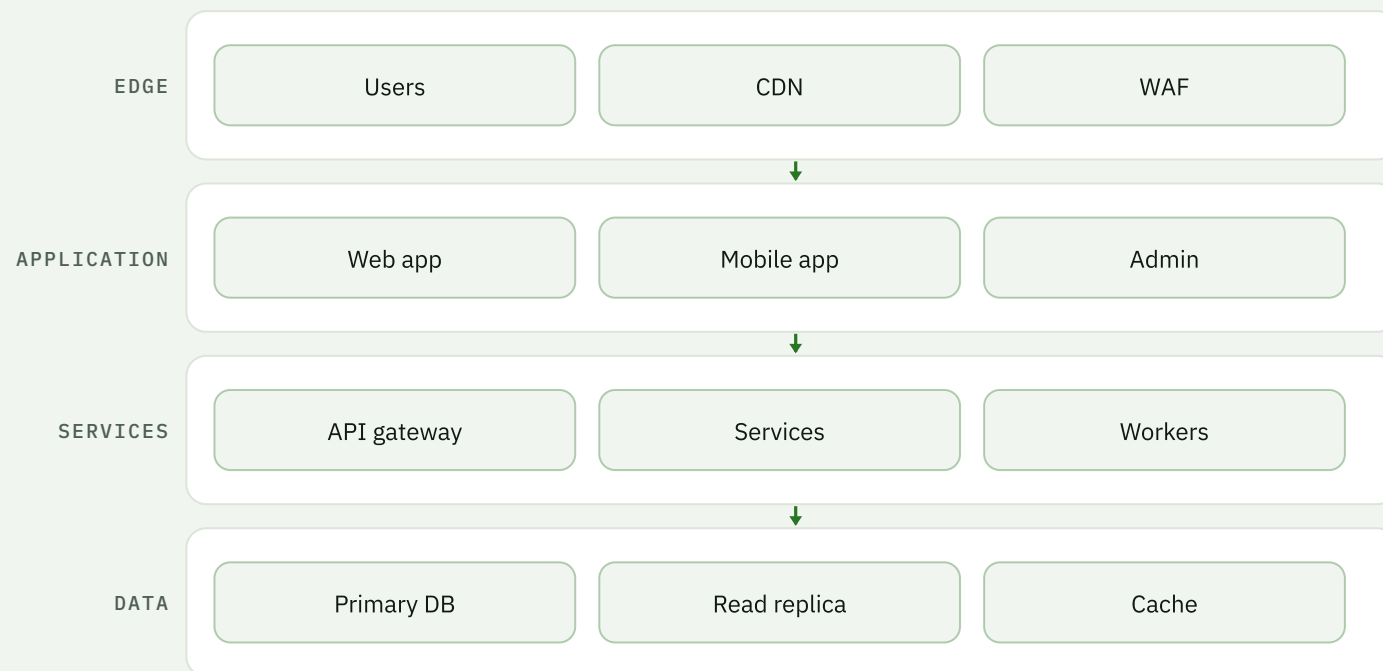

How a project moves from idea to production

The same disciplined flow, whether it's a two-week engagement or a year-long partnership.

A reference architecture we deploy from

Every engagement starts from a hardened, observable baseline — then adapts to your stack and constraints.

CI/CD

Build, test, scan and deploy on every merge.

Observability

Metrics, logs, traces and alerting from day one.

Security

VAPT, secret management and least-privilege access.

Engagement models built around you

Pick the model that matches your project's certainty and your need for control.

Fixed Price

Clear scope, clear deliverables, clear budget. Best for well-defined projects.

BEST FOR • Defined scope

Time & Material

Flexible scope that can evolve sprint by sprint, billed for actual effort.

BEST FOR • Evolving scope

MOST POPULAR

Dedicated Team

Staff augmentation — our engineers work as an extension of your in-house team.

BEST FOR • Ongoing capacity

Technology we work with

Chosen per project, not per habit — these are the tools we run in production today.

Jenkins / GitHub Actions

Common questions

Answers drafted from how the engagements are described in this deck — review and adjust before sending.

How do you price projects?

Three models: fixed price for well-defined scope, time & material for scope that evolves, and a dedicated team for ongoing capacity. Every engagement starts with a discovery call and a written scope before any commercial commitment, so the number is tied to a specific deliverable rather than an estimate range.

Do you sign NDAs?

Yes. We sign a mutual NDA before any detailed technical discussion, and we can work under your paperwork or ours. Client code, credentials and data stay inside the engagement.

Can you work with our existing team?

Yes — that is the dedicated team model. Our engineers join your sprints, your board and your code review process, and work to your standards instead of running a parallel track.

Do you provide support after launch?

Yes, under an annual maintenance contract: uptime monitoring and alerting, bug fixes and security patching on a defined SLA, dependency and framework upgrades, incremental feature work, and a monthly health and performance report.

What industries do you work with?

We are stack-led rather than industry-led — the engineering is the same shape whether it is a marketplace, a SaaS product or an internal platform. Where an industry carries specific compliance requirements, we cover it through the security track, including ISO 27001 and SOC 2 groundwork.
